AMENDMENTS TO THE ABSTRACT

Amend the Abstract as follows:

A rewinding machine is described ~~comprising~~
including: a path for feeding the web material towards a
winding system; interruption members to interrupt the web
material at the end of winding of a log; a core insertion
channel, defined by a rolling surface and a movable member;
a core feeder to insert winding cores in succession in ~~said~~
the channel; an electrostatic device positioned along ~~said~~
the channel to electrostatically charge the winding cores
and/or the web material thus causing, due to the
electrostatic charges, reciprocal adhesion of the core and
initial free edge of the web material obtained by
interruption of the material at the end of winding of each
log.
